DATA 200 LAB 1 REPORT

By Prashasti Srivastava (020100405)

Project files	**checkmygrade.py, test_checkmygrade.py, students.csv, courses.csv, professors.csv, login.csv**
Report focus	Alignment with Lab 1 requirements, actual CSV records, and unit-test evidence

1. Project overview

This project creates a console-based Python application. The application supports three roles: admin, professor, and student. Here, Admin manages records and user accounts whereas professors can see assigned-course information, and students can view their own grades and marks.

2. Lab 1 requirement mapping

Lab 1 requirement	How it is implemented	Status
Student records using linked list or array	Student records are loaded into LinkedList nodes through the Student class.	Met
Add, delete, modify student records	Handled by add_new_student(), delete_new_student(), and update_student_record().	Met
Search and sorted display	search_student() and sort_records() support search and sorting; tests print search and sort timing.	Met
Average/median or course statistics	course_stats() produces summary statistics for a course.	Met
Reports by course, professor, or student	ReportGenerator.display_grade_report() supports all three report types.	Met
CSV persistence for students, courses, professors, login	read_csv() and write_csv() maintain the four CSV files.	Met
Add, delete, modify courses	Course class provides add_new_course(), delete_new_course(), modify_course().	Met
Add, delete, modify professors	Professor class provides add_new_professor(), delete_professore(), modify_professor_details().	Met
Encrypted password storage	Passwords are saved in login.csv using a Caesar cipher with shift 13 (ROT13).	Met

3. Class design summary

Class / function group	Main responsibility	Key members
TextSecurity	Encrypts and decrypts stored passwords.	encrypt(), decrypt()
Session	Tracks the current user and role-based access.	login(), logout(), require()
Node / LinkedList	Stores student enrollment rows in memory.	append(), find(), find_all(), delete()
Grades	Maps marks to letter grades and supports grade reporting helpers.	marks_to_grade(), display_grade_report()
Student	Loads, updates, searches, sorts, and reports student enrollment records.	add_new_student(), delete_new_student(), update_student_record(), search_student(), sort_records(), course_stats()
Course	Maintains courses.csv.	add_new_course(), delete_new_course(), modify_course()
Professor	Maintains professors.csv and assigned-course details.	add_new_professor(), delete_professore(), modify_professor_details(), show_course_details_by_professor()
LoginUser / Admin	Handles login, registration, password change, and admin user management.	Login(), Change_password(), register(), add_user(), remove_user(), reset_password()
ReportGenerator / menus	Generates reports and connects all features through the console workflow.	display_grade_report(), startup_sync(), main_menu()

4. OOPS design

IS-A relationship: Admin inherits from LoginUser.

HAS-A relationships:

- Here Student has a LinkedList.
- LinkedList has Node objects
- ReportGenerator uses a Student object to build reports.

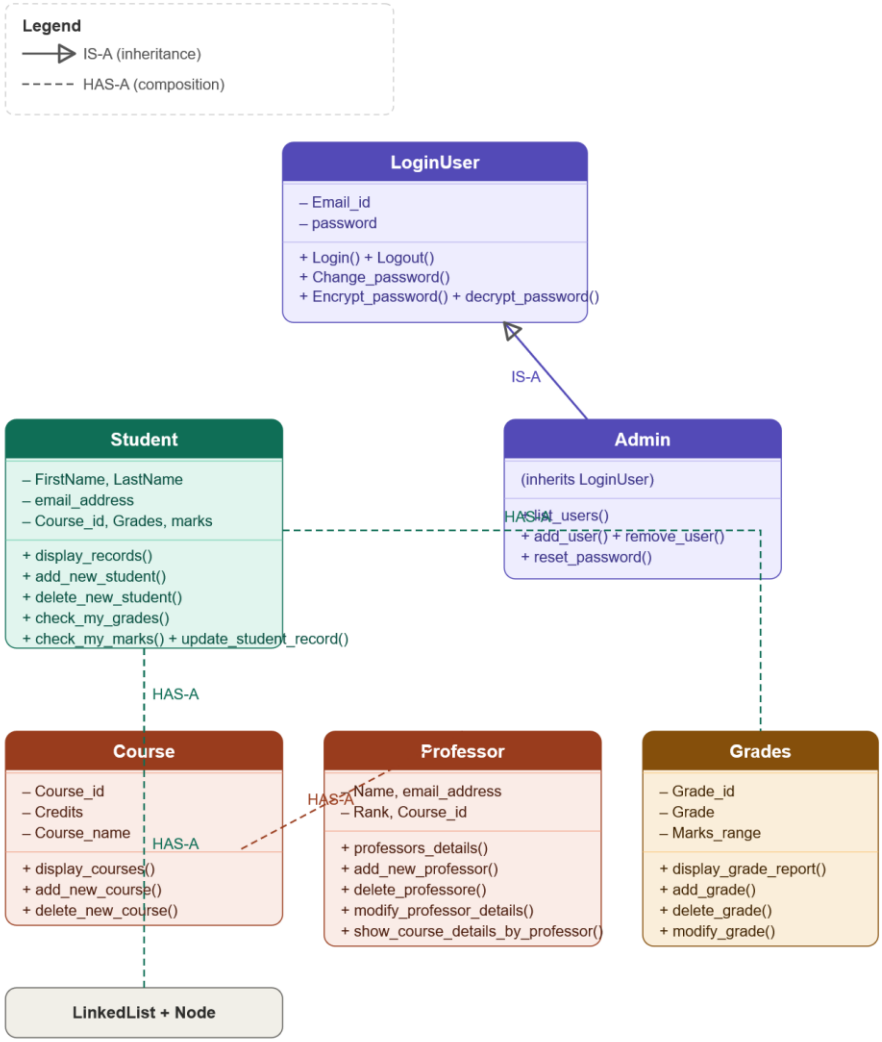

Figure 1. OOD relationship diagram included in the original report.

5. CSV files and actual records

The report below uses the current CSV contents from the project files, so the student, course, professor, and login records match the code base and dataset exactly.

5.1 students.csv

Email_address	First_name	Last_name	Course_id	Grade	Marks
sam@mycsu.edu	Sam	Carpenter	DATA200	A	96
sam@mycsu.edu	Sam	Carpenter	DATA220	B	85
sam@mycsu.edu	Sam	Carpenter	CS101	A	91
jane@mycsu.edu	Jane	Doe	DATA200	B	83
jane@mycsu.edu	Jane	Doe	DATA220	C	74

leo@mycsu.edu	Leo	Nguyen	CS101	C	74
priya@mycsu.edu	Priya	Sharma	DATA220	A	92
priya@mycsu.edu	Priya	Sharma	DATA200	A	95
raj@mycsu.edu	Raj	Patel	DATA200	C	78
raj@mycsu.edu	Raj	Patel	DATA220	B	88

5.2 courses.csv

Course_id	Course_name	Credits	Description
DATA200	Data Science Fundamentals	3	Provides insight about DS and Python
DATA220	Statistics	3	Applied statistics for data science
CS101	Intro to Computer Science	3	Foundations of computer science

5.3 professors.csv

Professor_id	Professor_name	Rank	Course_id
saini@sjsu.edu	Paramdeep Saini	Professor	DATA200
masum@sjsu.edu	Muhammad Masum	Professor	DATA220
john@sjsu.edu	John Smith	Professor	CS101

5.4 login.csv

We are keeping passwords in encrypted form. In this process:

- Admin123! will become Nqzva123!
- Prof123! will become Cebs123!
- Student123! becomes Fghqrag123! using ROT13

User_id	Password (encrypted)	Role
admin@mycsu.edu	Nqzva123!	admin
saini@sjsu.edu	Cebs123!	professor
masum@sjsu.edu	Cebs123!	professor
sam@mycsu.edu	Fghqrag123!	student
jane@mycsu.edu	Fghqrag123!	student
leo@mycsu.edu	Fghqrag123!	student

priya@mycsu.edu	Fghqrag123!	student
raj@mycsu.edu	Fghqrag123!	student
john@sjsu.edu	Cebs123!	professor

6. Code summary

- **CSV helpers:** read_csv() loads rows into dictionaries and write_csv() rewrites updated CSV files.
- **Security:** TextSecurity implements a Caesar cipher with shift 13 for password storage.
- **Access control:** Session keeps the logged-in role and protects admin/professor/student actions.
- **Student workflow:** Student handles loading, saving, CRUD operations, search, sort, grade lookup, and course statistics.
- **Flow of Course and professor:** Here the course as well as professor have their own CSV files and support add, delete, modify, and display operations.
- **Authentication and admin tools:** Here LoginUser manages login, logout, registration, and password changes; Admin extends it with list, add, remove, and reset functions.
- **Reporting and startup:** ReportGenerator builds reports by course, professor, and student, while startup_sync() aligns login/course data with student records when the application starts.

7. Unit testing summary

The current unit-test file contains 107 tests, and all tests pass with unittest. The suite checks the core Lab 1 workflows rather than claiming 100% line coverage.

Metric	**Result**
Total tests run	107
Tests passed	107
Tests failed	0
Search timing on 1000 records	0.5055 ms total | 0.0505 ms avg
Sort timing - email ascending	0.0102 ms
Sort timing - marks ascending	0.0114 ms
Sort timing - marks descending	0.0169 ms
Sort timing - name ascending	0.0063 ms
Test class	**Number of tests**
TestSession	6
TestStudent	14
TestCourse	5

TestProfessor	5
TestLoginUser	5
TestAdmin	5
TestStudentExtra	18
TestCourseExtra	5
TestProfessorExtra	5
TestAdminExtra	4

The tests verify student CRUD, multi-course enrollment, duplicate rejection, search and sorting, course and professor management, login and password behavior, admin operations, and several negative cases. They are strong evidence for the required Lab 1 features, although some interactive menu branches are still better demonstrated by the screenshots than by automated tests.

8. How to run

1. Keep checkmygrade.py, test_checkmygrade.py, and the four CSV files in the same folder.
2. Run the application with: python checkmygrade.py
3. Run the tests with: python -m unittest test_checkmygrade
4. Use the login.csv accounts to sign in as admin, professor, or student.

9. Program output screenshots

All screenshots from the original report are retained below as evidence of execution output. They are kept in the report and were not removed.

Logging in as Admin

```

10. Conclusion

The rewritten report is aligned to the actual code, current CSV records, and present unit-test file. It keeps the required screenshots, corrects the dataset descriptions, and stays focused on the features expected in Lab 1.
